

Hybrid Heat

PRODUCT INFORMATION

Turn to the Experts™

Hybrid Heat: the most energy-efficient system for your home.

Do you want a "green" home? Or simply to save money on high fuel bills? Either way, you'll reap terrific benefits with Carrier's Hybrid Heat™ system.

Much like a hybrid car, Hybrid Heat uses two energy sources — with a built-in computer deciding at any given moment which method will provide greater energy savings. Plus, this system will cool your home in the summer, too!

Carrier's engineers have calculated the typical cost savings for homes in the Northeast. While factors such as home insulation, outside weather and interior temperature all play a part, typical energy savings for a 2000-square-foot home could be \$709 each year. (Your energy savings may vary.)

Given New England's ever-changing weather, Hybrid Heat is something every homeowner should consider. CPS's home comfort consultants are experts in helping homeowners decide if Hybrid Heat is right for them. Contact us today for a no-obligation consultation.

HYBRID HEAT SYSTEMS

How it works:

Carrier's *Hybrid Heat* system pairs a Carrier gas furnace with a Carrier heat pump to provide soothing comfort. This powerful combination can deliver heated air temperatures that are warmer than most traditional heat pumps so air from your vents feels warmer to the touch.

Because a Carrier *Hybrid Heat* system also provides cool air when it's hot outside, this system becomes your total, year-round indoor comfort solution. And with the recent increase in the SEER rating (SEER = Seasonal Energy Efficiency Ratio) of heat pumps, a *Hybrid Heat* system saves you money during both the heating and cooling seasons.

The control of your *Hybrid Heat* system is completely automatic. CPS's technician will select a *balance point* — based on your home's characteristics and current energy prices -- that tells your control when it's best to select electric heat and when it's time to switch to the gas furnace. As utility rates change, this balance point can be easily adjusted.

INFINITY™ HYBRID HEAT SYSTEM

Infinity Series Gas Furnace

- Variable-speed modulating gas furnace
- Up to 95.0% AFUE
- Lifetime heat exchanger limited warranty
- 10-year parts limited warranty

Infinity Series 19 two-stage heat pump

- Up to 19 SEER/11.5-14 EER
- Up to 9.0 HSPF
- Puron® environmentally friendly refrigerant
- Infinity thermostat compatible communicating systems
- Sound levels as low as 72 dBA
- 18-point diagnostic capability
- 10-year limited parts and compressor warranty

PERFORMANCE™ HYBRID HEAT SYSTEM

Gas Furnace

- Two-stage heat capacity
- Up to 93.0% AFUE
- Lifetime heat exchanger limited warranty
- 10-year parts limited warranty

Performance Series 15 heat pump

- 15 SEER/12 EER
- 8.5 HSPF
- Puron® environmentally friendly refrigerant
- Infinity thermostat compatible communicating systems
- Sound levels as low as 68 dBA
- 14-point diagnostic capability
- 10-year limited parts and compressor warranty

COMFORT™ HYBRID HEAT SYSTEM

Gas Furnace

- Two-stage heat capacity
- Up to 93.0% AFUE
- Lifetime heat exchanger limited warranty
- 10-year parts limited warranty

Comfort Series Heat Pump

- 13 SEER/11.5 EER
- 7.9 - 8.5 HSPF
- Puron® environmentally friendly refrigerant
- Sound levels as low as 70 dBA
- 10-year limited parts and compressor warranty
